Boom Lifts

Boom Lifts Training Kingston - Boom lifts are machinery that has a platform that can be lowered or raised to different heights, hence making this piece of equipment an important requirement in a wide variety of professions. Available in several specific types such as aerial lifts, scissor lift trucks, and knuckle boom lifts, each version operates very specifically.

The common aerial lift adaptation is regularly utilized at snowboarding lodges to transfer people who are not at ease using the ski lift. Working in a manner similar to that of an elevator, skiers are transported up the mountain in stages, stopping at stations along the way until they access the apex. Aerial hoists are also used in construction, moving personnel safely up and down the sides of multi-level construction sites.

Scissor lifts are also in the boom lift class. They are utilized regularly by service providers as an ideal system to allow personnel to complete upkeep and repair on wires and cables that are attached to poles. Telephone, cable television and power corporations have relied on the proficiency of this kind of boom lift for years.

The knuckle boom lift is made for use within locations of rough ground and where the need to reverse direction might be necessary. This kind of boom jack has the ability to fit in tight spots where a scissor jack cannot fit. Working among multiple machines in a production plant or in close proximity sandwiched between two walls, the knuckle boom additionally features a standard platform outfitted with rails for security and employee safety.

The type of boom jack required by companies will usually depend on the nature of the job required. Luckily, there are suitable models for just about any job.
