JLG Telehandler

JLG Telehandler Training Kingston - In the late 1960's John L. Grove, with his wife Cora started out on a cross country excursion in their RV. Recently retired, after spending several years working with his brother to assemble their crane business into an industry leader, John had no idea that important trip would permit JLG Industries, Inc to emerge. The world leader of mobile aerial work platforms and precision material handling technologies was the end consequence of a road trip.

All through their journey, John reacquainted himself with former business associates along the way. In combination with these conversations and a noteworthy event; two workers were tragically electrocuted on scaffolding when the Groves were passing through the Hoover Dam. John discovered an infinite market for a product that could swiftly and safely elevate people in the air to accomplish upkeep and other building services.

Upon returning from their travels, John established a partnership with two friends and bought a metal fabricating company in McConnellsburg, Pennsylvania. In 1970, opening operations with a crew of twenty personnel, they created and sold the first JLG aerial work platform. The business incorporates many of the basic design essentials of that original lift into existing models.

JLG lift trucks have come a long way since Mr. John L. Grove came back to town from his cross-country road trip and since the initial aerial work platform debuted on the market. At present, the business proudly continues to expand itself into a range of marketplaces worldwide and develops new products to ensure customers are capable of being more effective and perform in the workplace within a safer atmosphere.
